

S 9206 servo

No. F 1289

Ultra-powerful super-servo for model aircraft, helicopters and cars

A true power servo for all applications where huge strength is required.

Super-servo offering extremely high resolution and modified servo amplifier for even higher positional accuracy.

Provides 95 Ncm of torque even at 4.8 Volts, and at 0.14 sec/45° is also exceptionally fast.

Successor to the proven S 9204 servo with modified, stronger gearbox.

The two final output gears are precision-machined from metal.

New, even more powerful bell-armature motor.

The gearbox is twin-ballraced and coupled to the special 6-finger wiper potentiometer via an indirect drive system.

Splashproof housing makes the servo ideal for use in ultra-harsh conditions.

Specification:

Operating voltage:	4.8 Volt
Torque:	95 Ncm
Transit speed:	0.14 sec / 45°
Weight:	53 g
Dimensions:	40.5 x 20 x 37.5 mm

Replacement gears for S 9206

No. F 1376

Replacement gears for S 9206 servo.
